NOAA's Climate Prediction Center Releases Updated El Nino/La Nina Information

The National Oceanic and Atmospheric Administration's (NOAA) Climate Prediction Center (CPC) released their latest information regarding the status of El Niño-Southern Oscillation (ENSO):

- NOAA scientists declared the arrival of La Niña, calling it present, but weak.
- It is predicted to be short-lived, possibly lasting only a few months.
- La Niña is associated with cooler-than-average sea surface temperatures in the Equatorial Pacific, which trigger changes in the atmosphere.
- You can find more detailed information on La Nina on [CPC's website](#), or on NOAA's [ENSO Blog](#).
- NOAA will issue an updated Winter Outlook on Thursday, 11/17/16.

WEATHER SYNOPSIS BY REGION

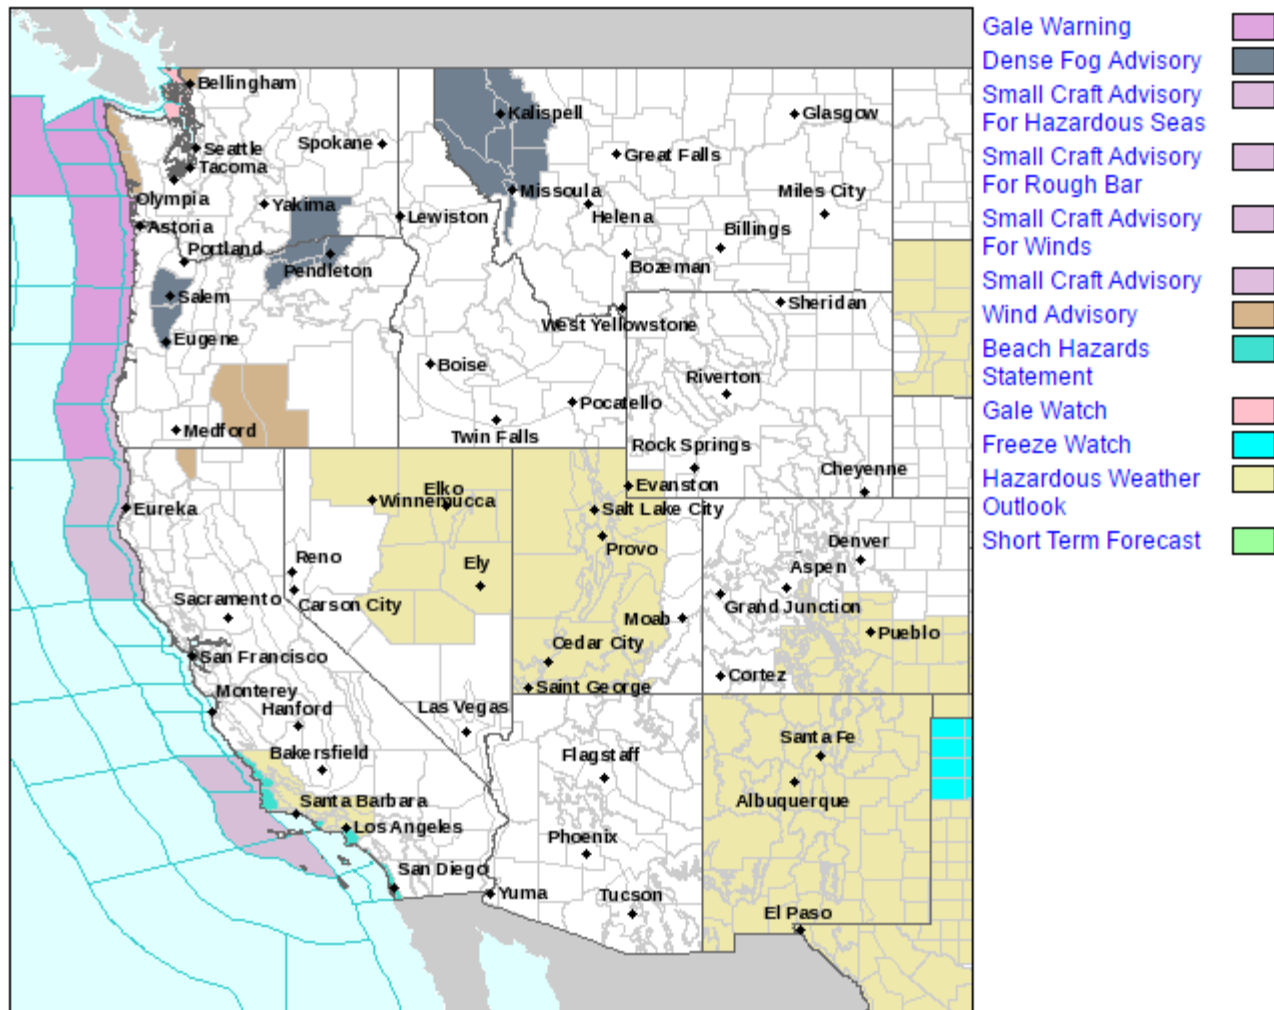

NORTHERN CALIFORNIA

Rain will return to the North Coast just in time for the start of the holiday weekend. By tonight some light rain or showers will be possible in the North Bay, but will end by sunrise Saturday. Varied weather can be expected for the coming weekend. A weak weather system will bring clouds and cooler temperatures on Saturday with a chance of showers over the coast range and areas north of about Chico. Drying conditions will briefly return for the latter half of Saturday and into Sunday, before another system approaching brings more rain early next week. Clearing and warmer temperatures are expected on Sunday. Another stronger system is expected to move through Northern California around mid week bringing a more significant period of rain and mountain snow.

SOUTHERN CALIFORNIA

The strong ridge of high pressure that has been over California the last few days will weaken bringing a slow cooling trend through Saturday. Maximum temperatures will be in the mid 60s to mid 70s across the mountains and mid 70s to upper 80s in the valleys today, with 60s to low 70s across the mountains and mid 70s to mid 80s in the valleys Saturday. The ridge will strengthen causing a slow warming trend Sunday and Monday. A few degrees of cooling will take place Tuesday as the ridge of high pressure weakens. Minimum humidity will be mainly between 15% and 30% away from the Central Valley and coastal areas through Sunday and then drop to 12% to 25% Monday and Tuesday. Winds will be light through Tuesday, except there will be east winds of 10 to 20 mph with gusts to 35 mph across San Diego County this morning. A Pacific trough will move inland across the West Coast cooling temperatures to near normal Wednesday and Thursday. Scattered showers will move over Central California Wednesday, with the snow level between 5,000 and 6,000 feet. This trough will also bring strong south to west winds to the mountain ridges and desert passes Wednesday and Thursday.
